

LiliF NDV Ag RAPID KIT

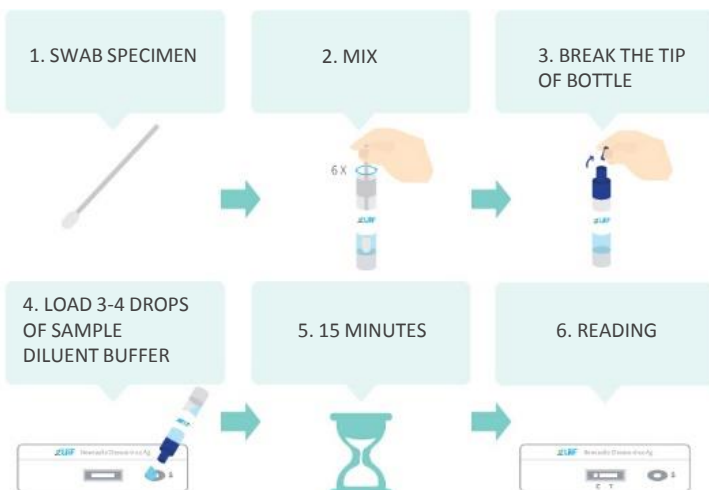

CHARACTERISTICS

The Newcastle disease virus (NDV), is a variant form of avian paramyxovirus 1 (APMV-1) with a negative-sense and single-stranded RNA virus. NDV/APMV-1 belongs to the genus Avulavirus in the family Paramyxoviridae. Transmission occurs when exposure to faecal and other excretions from infected birds, and through contact with contaminated food, water, equipment, and clothing. LiliF NDV Ag Rapid kit is a Lateral Flow Immuno-Chromatographic Assay kit for the rapid and accurate quantitative detection of NDV Ag in chicken oropharynx, spleen, or kidney swab.
